

End-to-End Auto ID and Compliance Solutions

So you've determined you need to identify and track critical items and assets throughout their lifecycle, and to more precisely manage production, inventory and supply chain logistics in order to advance your organizational competitiveness and preparedness. Chances are, you're operating in a highly regulated industry and environment where failure to comply with increasingly stringent process and quality standards is not an option. Where item quality and location cannot be in question. And where there is zero tolerance for supply chain or production line bottlenecks.

Now what?

Whether you're involved in manufacturing, maintenance, property management, the military or government, A2B Tracking offers you a range automatic identification (Auto ID) and compliance solutions

designed to provide accurate asset identification, marking and tracking. These include asset tags, linear and 2D Data Matrix barcodes, IUID barcodes and radio frequency identification (RFID) tags, that can be attach to critical parts, assets and equipment so that they're easily traced and recorded. Auto ID solutions ensure your items are 'visible' at any time, from anywhere. And A2B makes sure you get the right one.

Auto ID Systems

Identify, track and trace assets, parts and equipment from production through disposition to ensure item readiness for usability and inventory audits. Meet evolving military and commercial compliance standards, eliminate costly errors associated with manual data entry, and integrate your Auto ID solution into existing ERP and financial systems.

IUID Compliance

Meet DoD MIL-STD-130 standards for IUID barcode labels and plates on all applicable assets and be audit-ready while achieving your IUID implementation goals. Reliably verify, validate and register labels and plates for end-item deliverables, government furnished property, or legacy items. Also, comply with the DoD's WAWF and IUID registration requirements.

Asset Management

Accurately manage and track serialized and non-serialized assets throughout their lifecycle and meet evolving commercial and military compliance standards. Cloud-based tracking software, labels, industrial hardware and mobile applications combine to give you total asset visibility around the globe.

Track & Trace

Know exactly where your items are, where they've been, and how many there are with A2B asset tracking solutions. Locate items by unit, case, pallet or container. Determine item condition, custody and availability. Enable precise and efficient recalls. And make sure items are authentic and not tampered with.

Shipping & Invoicing

Manage Wide Area Workflow (WAWF) and Military Shipping labels for packing, shipping and invoicing requirements to military standards using IUID barcodes and RFID tags with cloud-enabled software. Electronically submit Advanced Shipping Notices and DD250 reports, generate WAWF Combo reports for submission, and process DD 1149 for property transfer.

Identification & Marking

Create, print, verify and mark serialized item and asset tags using A2B labels and plates, advanced systems and services. Use barcode and RFID technologies to access and manage item-unique data on key components and match it to end-item assemblies. The goal is to help you plan resources better and make more informed decisions on asset ordering and allocation.

Counterfeit Prevention

Fight the presence of counterfeit items in the supply chain with layered item authentication solution. We apply advanced physical-layer authenticating techniques with the use of item-unique serialized global identifiers such as IUID barcodes to make it virtually impossible for counterfeiters to duplicate.

Technology

Lower your IT overhead costs by managing assets throughout their lifecycle in a single application. A2B web-based software ties together linear and IUID barcodes and RFID tags with integrated mobile scanning technology, mobile computers and smartphones – all hosted and connected to the A2B cloud.

Your Industry. Your Next Step.

A2B Auto ID and compliance solutions are ideal for highly-regulated industries and environments such as defense, government, education, research facilities, healthcare, industrial manufacturing and energy where minimizing item loss, theft or duplicate orders, and ensuring item authenticity, safety and security are imperative.
