## Tool Crib Manager

Whether you're managing production, maintenance, repair, or warehouse operations, you have to accurately track the movement and condition of your tools, parts and equipment to optimize your organization's performance. It's not an option. UC! Web's new Tool Crib Manager gives you the power to better meet the unique demands of daily item check-out and check-in activity by letting you precisely track the location, custody, count and condition of your items anywhere, anytime. That way, you can shore up stock levels as required, improve asset utilization, increase productivity, minimize waste and boost ROI. Tool Crib Manager offers you an end-to-end solution for automatically tracking all of your serialized and non-serialized assets.

KEY ADVANTAGES

> **No paperwork** – accurately manage assets across multiple shifts

> **Improved organization** – know what you have and where it is

> **Keep your assembly line moving** – no misplaced or unavailable tools

> **Accountability** – track who's responsible for non-returned or damaged items

> **Accuracy and safety first** – know when your tools need repair or calibration

> **Manage from purchase to disposition** – mark, scan, and track from a single application

CHECK OUT. CHECK IN. REPEAT.

UC! Web Tool Crib Manager tracks the selection, distribution and return of tools, parts and equipment starting with the creation of the work order.

Cycle diagram labels: Create Work Order · Scan or Select Item · Assign Item to Requester · Check Out Requested Item · Check In Returned Item · Quick Check In · Quick Check Out

When a tool is required for a minor task, Tool Crib Manager allows for quick item check-out/check-in, conveniently bypassing the longer, formal process.

ACHIEVE OPERATIONAL EXCELLENCE

Tool Crib Manager provides insight into the location, availability and condition of SKUs for complete traceability of your assets. Configurable features let you customize the application to meet the needs of your organization. Set up processes and templates to increase your throughput for on-demand asset visibility.

Track Serialized and Non-Serialized Parts and Equipment by SKU

> Track parts by SKU, SKU location, and quantity of parts at a location

> View status of parts in SKU including availability, usability, reserve status and more

> Create a hierarchy of locations from facility and tool crib to shelf and bin

> Adjust inventory automatically with item check-out/check-in

> Create reports that list quantity of parts by location

Manage Check-In/Check-Out Process

> Easy-to-use work order system

- Customizable hierarchy definitions
- Assign details and items to work order
- Select custody and location information
- Track order status and close dates
- Use ad hoc work orders for quick check-out with minimum data entry

> View status of parts in SKU including availability, usability, reserve status and more

- Check out items for temporary or permanent use
- Auto debit stock for non-returnable parts
- Generate templates for predefined item lists
- Set reorder count and emergency limits to manage SKU stock-outs
- Assign business rules to order, pick and supply serialized or non-serialized items
