# Amplify Fusion

Automate, orchestrate, and govern integrations with a no-code, AI-ready solution

Chances are, your enterprise is under pressure to modernize fast, but integration remains one of the most persistent obstacles. Legacy systems, fragmented tools, and siloed teams make it difficult for you to deliver change at speed without compromising control.

Amplify Fusion is built to break through these constraints by helping your IT and business teams automate, orchestrate, and govern integrations across cloud, SaaS, and legacy environments without ripping and replacing what already works.

Whether you need to unlock data from siloed systems, reduce vendor lock-in, or scale AI-ready orchestration, Fusion enables incremental modernization — with full confidence and control. You'll minimize IT bottlenecks, optimize existing assets, and deliver connected experiences faster.

Flow that reads support ticket information in Kafka, converts it to the appropriate Jira format and then creates a support ticket in Jira.

AMPLIFY FUSION BENEFITS

- Low-code/no-code design reduces integration friction for rapid time to value
- Enterprise-grade performance and certified security ensures trust and compliance across environments
- AI-ready architecture enables event-driven orchestration and LLM integration with real-time, composable logic
- Secure, federated platform delivers full visibility and governance out of the box
- Incorporating existing systems into modern workflows preserves legacy investment
- Composable flows simplify integration across MFT, B2Bi, APIM, and finance systems

Extend the value of existing integration stacks

Amplify Fusion brings new capabilities to Axway MFT, Axway B2Bi, Amplify API Management (APIM), and Axway Financial Accounting Hub (AFAH).

MFT: Modernize file transfer with agility

- Extend MFT deployments with visual orchestration
- Automate legacy manual processes (reconciliation, data validation)
- Reduce implementation complexity with reusable templates
- Accelerate production rollouts with easier upgrades and controls

B2Bi: Streamline multi-partner ecosystems

- Integrate SaaS, Kafka, and event-based systems in one flow
- Modernize EDI setups with cloud-native connectors
- Automate chatbot, CRM, ERP, and supplier network integration
- Implement storage connectors and async connectivity to simplify processes

APIM: Integrate flow logic into API strategies

- Offload orchestration tasks from API Gateway to Fusion
- Visually compose APIs from any back-end system
- Enable real-time API exposure for internal or partner use
- Integrate event-based triggers for responsive digital services

AFAH: Real-time, composable finance integration

- Easily connect systems and automate financial processes
- Shift from batch to real-time flows using APIs, web services, or Kafka
- Improve finance agility, performance, and quality of data
- Modernize accounting integration using new digital patterns

Integration engine with enterprise-grade governance accelerates your AI journey

Amplify Fusion provides a framework to scale LLM interactions and intelligent automation without compromising data protection, operational standards, or accountability.

Governed AI access	Centrally manage how apps and users interact with internal and external LLMs via secure, API-based channels
Prompt and token oversight	Enforce runtime rules and monitor usage to maintain auditability and cost control (coming soon)
Compliance-ready flows	Ensure traceability and policy adherence in alignment with standards such as GDPR (coming soon) and HIPAA
RAG and MCP enablement	Support RAG (Retrieval-Augmented Generation) and MCP (Model Context Protocol) across apps, portals, chatbots, and internal tools for intelligent, adaptive user experiences (coming soon)
Event-to-AI activation	Trigger LLM-based decisioning from enterprise events and business systems
